Akron

Sioux City
Florence Neb. 1910

Eldon
Chillicothe

Council Bluffs.
1909.

Oct 6, 1909 (Wed)

Left Iron City at 10³⁰
for Cedar Rapids.

Oct 7, 1909 (Th.)

Left Cedar Rapids for
Spirit Lake at 2:35 am.

Reached Spirit Lake at about
8¹⁵ am. Took team at
Mrs. Miller's (\$2.00 - Leibner's man
tried to charge me \$3.00 + pay
for feed at noon) + drove
to Miller's Bay. A few
fishing boats were out, but
everything seems to be
abandoned.

Took a lot of photos.
It was a little too windy
for comfort, but I
am hoping for the best.
The following photos
were taken (all on 27's):

Photo 12

View from point of view
looking N. about 1/2 mi.
S. It is just the same

Photo 13

small Rev. building

Looking N. from
Smith's dock

Mon.

Got down Vallisneria a long the beach.

Returned to Spirit Lake at

2:15 PM. & went over to get

Elodea at landing. Vallisneria

was almost out sent out cards.

Packed a bundle of stuff &

went it to depot.

Left Spirit Lake at 5:23 PM
for Sioux Falls.

Reached S. F. at about 9:15

PM. & put up at the

Dacotah Hotel (\$2.00)

Sent out cards.

Oct. 8 (Friday)

Left for Sioux Falls at 6:50 AM

Spent morning in the city.

Went to the office.

Spent afternoon in the city.

Went to the office.

 narrower with padding up.
 feet will be easy.

(This is the same as the
 Alderson.)
 They found a large & small
 central area - a little piece
 of slate.
 (The same as the Alderson
 and the B. K. sandstone
 but look like, but
 different.)

I gave W.A. vol. XVIII
 LeRoy Anderson
 Alderson, Va
 Want skeleton for school
 (Get at least part)
 Wants local survey reports
 See about getting more

See if Jackson, who
Jensen at Sioux City

Mr. W. F. Butcher
R. F. D. Akron, O.
The packages of books
of bones have come
well.

Spent until 5:00 p.m. working with the Jensen's. Took the daughter, Mrs. J. Dierksen, to the High School & got the teacher fragments of bark & bones. Looked up Mr. Jensen's address and N. Lane.

Discussed Mr. Jensen's health
& his chance for relief
at Iowa City. The poor
man is now totally blind
& seems to suffer from

But I took all the material with me - their part of it as a loan.

I then drove over to
W. L. Mitchell's place
in So. Dakota. Found
him away from home,
but Mrs. B. gave me
3 or 4 fragments of bone,
will write to him for
more. She said that he
had a lot of it, in small pieces.

Put up at the new
Mendall again.

Mr. Eads wants I
know about 100 in
Society membership &
cost of publications.

Wed 7 (Sun) 1922

Went to the
Mendall again
to see the
new building
which is
a very great
number of rooms
also built on the
side.

He told me that
the Indians began to
leave the village
there was a great
village very close to the
house.

There was a great
village.

(Dad Robinson is Dad Hall
Soc., at home)

Get his my hands &
Pawnee.) -

He was very
happy.

The Loveland is here redder
in upper part for 2 - 4 ft.
Lower down it is yellow, heavy,
horizontally stratified, & with scattered pebbles.

From road a gully road led ✓ for 300 yds
west on N. side of stream forming a gravel, rising
6 + ft above road & covered mostly with
lighter colored gravel. At x, on face of, a
break of gravel stream & little (to be seen) &
looks like a singularity.

10

girdling

Photos 3 & 4 show point
 pre-Kansas as seen from
 Price. This is one
 repeatedly photographed.

1st cut S. of Price. Photo 13, 14, 15. Looking N.W.

2-3 H. - Kansas

This is N. end.

Photo 4/2 4/2 - Same, but
 from N. end, looking S.W.
 The pre-K. extends up to
 about base of Calceolaria
 hole, at least 6 ft above
 road, which is 10-12 ft
 above bottom.

The peckham is exposed here for
 several rods, but its upper line
 is not sharp, as slumped material
 interferes. The big lump of silt here is
 evidently a fluvial
 net.

Went N. from
 Council Bluffs - 4 1/2 miles

Photos 17 & 18

Looking E. at edge of peckham & silt.
 Prof. section. Sandstone peckham
 Wm. S. is at top of section.
 A stream runs out at base of
 Y. willow. This is last large
 exposure before ledges of
 conglomerate are reached.
 (This is cut 10)

Photos 33 & 34

Looking N. at edge of peckham & silt.
 (cut 11) main one.
 Photo 9 & 10 - cut 11. Big boulder.

Photos 5 & 6 & 3/3 -

Loveland in rock. N. of
 conglomerate ledges (exp. 14)

Loveland here
 at least 30
 ft. deep.

I could trace ledge
of ^{aptian} conglomerate 60
ft. back from face
of bluff in narrow
cut leading to great
R.R. cut. Only slight
rise between.

In the great cut the
aptian now shows
about 200 ft. back
from face of bluff,
showing that gravel is
not only along edge.
The conglomerate runs back
at base, & in the
great cut goes in at least
60 ft., on slight rise.
In cut fine typical
cross bedded sand ridges
at least 15 ft above
conglomerate base.

all along here the cementation of aptian (4-8 ft)
is consolidated into conglomerate. Evidently water
runs out so much that evaporation leaves a
cement which holds conglomerate.

Exp. 14

cut through at R.L.S. - at N.W.

This is sketch of great R.R.
pit 1/2 mile N. of mile post 4 - N.
of Co. Bluffs. 1/2 mile past 4 is aptian
conglomerate (aptian) sedgs.

aptian
sand
15

The conglomerate is fully
8 ft thick here, & below it, as all along, &
thin layers of coarse sand
& gravel, resting on
pre-Kamron & from it
water runs down.

The aptian runs (near 200)
more than 150 ft from
face of bluff, & farther
as exposure on E. side is still deep.

In lower part of face of
bluff (or base) just S. of
entrance a mass of
Aptian silt of same
character as in Anderson
pit at Soc City, & below
a red layer of
gravel conglomerate.

Exp. 12
Plot 34 - first fine exposure
showing conglomerate, & first one

Taken all
subalt Jones

Additional notes.

When we started in above
Council Bluffs we drove
up to examine (7) of my
previous notes, a deep
gorge made by RR.

Pre-Kansan slates at bottom
(+ sides) of gully, and boulders,
sand & gravel are in bottom
of creek running down springs.
Conglomerate evidently present,
but all much obscured by
slumping. Island is
prominent, reddish, especially
above.

My old cut (8) shows, in gully
and by streamlet running down
spring, some (6-8) ft. of pre-Kan
& water running above it.
North from this is slumpy
and seepy bank
Took another sample of pre-Kan
from cut 8. (with few pebbles.)

Picked up box of seeds.

Pole. multicaulis, also var. *rufa* &
var *alba*, some *obliqua* (large)

Pyram. attenuata, *Vitrea*
hammii, *Zonitoides aculeatus*.

Very rich & wet.

~~(To get these seeds from the container

RR. to Iowa City 1.61

Nov. 26-1907

Left Iowa City for Eldon
(via Elgin, Liberty and
Columbus, Ia.) at 6:28 PM.

Reached Eldon at 11:25 PM &
put up at Eldon Hotel

Went No. 2.

The last cut close to track
just about where RR leaves
Des Moines river & just S.
of point where Eldon crosses.

6 ft. of whitish joint
clay with red streaks (see sample)

658 Dashed, very rusty (faded) iron tubes) iron clay.

Bluish (looks like lava
but no pebbles or stuff)
about 3-4 ft exposed

Then about 15 ft. down
to track. This is moist.
slide Talus

All these cuts along RR
are in a terrace which
extends back a $\frac{1}{2}$ mile or
more & then hills rise
gradually & irregularly.
The materials in all the cut
show water action.

The terrace rises about
30 ft above RR &
the latter is about 12 ft
above the lowest Des Moines
bottom, or about 15 ft. above
river.

In series of cuts between
this & Eldon there is
horizontal stratification
with bands & lenses of
sand & gravel, occasionally
iron-cemented into thin
plates.

all inclined to bend except
topmost & lowermost part.

Photos 35 & 34 & 25 & 26

Looking up these bluffs
nearest me has quite
a lot of gravel.
about 1 ft above bed of creek
at X rock ledge shows
above it 2 or 4 ft of black
shale. above that boulders

The section is not
clear all this
low. The creek is
about a foot or so
wide. The section is

At 11²⁰ went to Kirkville &
arrived at Chillicothe, then to
New York sec. 4 - can stop.

Bluff 1 shows dark blue
below but sandstone above
it. It is not peck.
The drift is pebbly stuff
(to some) evidently water laid

Bluff 2 shows yellow back
shade (grayer below) 2-3 ft
above creek. Then sandstone
reddish rock, ^{with plants,} then gravelly
layer. evidently water laid,
mixed with clay. This is at
S E end

At N. end a pebbly
dark blue stuff below may
be Peckham, then a
layer of 2-3 ft of red
gravel (some silt below)
then a layer of water laid
stuff with coal plates
6 ft., then red pebbly
water laid layer, bluish

(8 also very red) a line, as at Eldon.

N. end

- a - bluish green base (in sample 1 ft.)
- b - Red, shaly, with fine bluish (in sample)
- c - Pure limestone? (in sample 1 ft.)
- d - Red (especially above) at corner? - 2-3 ft.
- e - Concave limestone with oxidized (near to top)

about 6 ft.

f - red clayey, with small boulders, also more bluish joint clay (last limestone, but no (in corner))

Akron, Ia. Oct. 8, 1887

This is to certify that I have received from Mr. Severin Jensen one Mastodons tooth, and fragments of tooth, the material to be taken to the State University of Iowa for study in connection with Geological Survey work.

It is stipulated that if Mr. Jensen desires the return of this material, it will be returned on demand. If it is desired by him that the material shall remain in the University collection, he shall ~~be~~ receive the sum of Fifteen Dollars (\$15.00) therefor -

W.D.
Spaulding Secy. 3.

The railroad, I am sure
 especially, who have been
 hotel, and many other things, and
 I should, later, I hope.
